

PROFILE 92B PANEL

– frameless solution for 5 mm panels !

With our 92B profile you can create elegant double sided frames where only the graphic is visible from the front.

The profile has been designed to receive a solid panel up to a thickness of 5mm and mounted to the profile with magnetic tape or Velcro. This offers a simple and quick method for replacing graphics.

With a profile thickness of 40mm, the natural anodised aluminium profile offers appealing looks complementing the graphic panels. The profiles are mitred at 45 degrees and assembled using our 614 corner coupling.

Designed to be free standing when used with base plates or wall mounted.

Frames have mitred corners with a hidden coupling and are assembled using just one tool.

FACTS:

Natural anodised aluminium profile 92B is supplied in 5 m stock lengths or can be cut to custom sizes.

Max recommended depth on media is 5 mm plus 5 mm velcro or doublesided magnet tape.

Art No	Description	Size	Packaging
92B	Profile 92B	40x5000x40 mm	100 m
